

The goal of the project was to design a residence in a "French Country" feel that would contain a grand entry and maximize the views of the property while not exceeding 4500 SF of finished space. This was achieved through designing a sprawling home with a large courtyard to receive guests. The home includes 80 windows throughout, to take advantage of the properties beautiful 10 acre site. Each window was strategically placed to maximize the different vistas around the home.

The great room was dropped down to the lower level to enhance the experience as you enter the home. The residence contains three full bedroom suites as well as a master suite. The main living area includes a hearth room, breakfast area and a full chef's kitchen, directly connected to the formal dining room. There is also a large, English imported conservatory on the main level. The lower level contains two full bedroom suites, the great room space, and other auxiliary spaces. A larger guest suite was constructed for family and visitors above the garage; this space also includes its own living room.

#### Project Specifications

Construction Type - New Construction  
Style - French Country  
Square Footage - 4100 SF  
Site Size - 10 Acres  
Date of Completion - 2005

#### Project Services

Design Development  
Interior Architecture  
Construction Administration  
Construction Management
